SCIENCE OF MELANIN & BLACK GENETICS

A TRANSFORMATIONAL PROGRAM

Sunday 14th January 2018

RECLAIMING OUR ANCESTRAL IDENTITY

BEYOND SCHOOLING TO EDUCATION

““

Revolutions are brought about by men who think as men of action, and act as men of thought.

Kwame Nkrumah

MESSAGE FROM OUR FOUNDER

There's no question that we're living in an unprecedented moment of human history. One in which post coloniality proved a misnomer and the players on the geo political landscape held power.

However it is also one in which the spirit of Pan Africanism has awakened in those who seek liberation and change. A change not only for justice, rights and equality but for equity on every local, national and world stage.

This spirit has provoked introspection, resolve and self-determination. It is now birthing movements and institutions, building through solidarity and self-interest.

At The Centre our school of learning is organised to develop uniformity and consensus on the cultural, social economic and political consciousness of diasporans around the world. We welcome you to a space of first class intellectualism and critical thinking, a space for solutions, mastery and personal growth.

We use a cross discipline collaborative approach to learning the major humanities from an African perspective. We will expose you to first class academics and thinkers whose research and insights inspire and transform. Whichever program you choose, our aim is for you to harness the greatness bestowed on us by the ancestors and leave equipped to reach the fullness of your potential.

Thank you for joining our community. A change in society starts with you, a change starts with us; and as we continue to lay stone upon the road to freedom let us remember we are African not because we are born in Africa but because Africa was born in us. That is our Centre.

Enjoy your studies.

Founder

Nigel Stewart

Our mission is to create an inspirational space for intellectual conversation and study, both digital and physical.

MELANIN & BLACK GENETICS

A TRANSFORMATIONAL PROGRAM

COURSE OVERVIEW

The melanin and black genetics course for beginners is the fundamental first step to understanding the inner working of the biological dark matter known as melanin. It explores the microbiology and cellular properties that make Africans unique. The course breaks down melanin dynamics to determine the exact potential of the high frequency vibrations in melanin that decide our fate. Through scientific research and cutting edge studies we establish diet as key to understanding the application of melanin and uncover the hidden truth about its history and future role in civilisation.

This course also helps students begin overstanding how food affects melanin on a biochemical level, and to shift mind patterns by looking at the energy and consciousness required to discover a true sense of self.

SCHEDULE

Week 1 - An Introduction to melanin biology

Student will be well versed on the biology and how melanin influences our biological system.

Week 2 - Breaking down melatonin and serotonin

Student will understand dynamics of the circadian rhythm and it's affects on the whole body.

Week 3 - The difference between Eumelanin and pheomelanin

Student will gain a deep understanding of how melanin is a distinct marker in human genetics.

Week 4 - A look at the Pineal gland in detail and what do we know about it

Student will be will be able to get a better understanding of the pineal gland both physically and metaphysically.

Week 5 - Melanocyte and how melanin is produced within our DNA

Student will learn fundamental DNA structure and where melanin is found on the chromosome. You will understand what DNA is and it's function from an occult concept.

Week 6 - Melanin and sunlight

Student will learn that they are light beings that have an amazing relationship with light and how their melanin is able to convert light into simple sugars for energy.

Week 7 - Student will learn how converting energy from sunlight is done on a cellular level

Student will be able to have learnt how the converted energy from sunlight is done on a cellular level.

Week 8 - The Role of melanin in the brain, looking at

LEVEL: BEGINNERS
DURATION: 12 WEEKS

neurons and energy

Student will gain an in depth understanding of the human brain and how thought is processed biochemically.

Week 9 - Overstand nature as it pertains to food and correctly define what it means biochemically

Student will learn what food is biochemically and be able to differentiate fake food from real food.

Week 10 - Establish the difference between an Alkaline food and acidic food, plus how to heal the body through food

Student will overstand the melanin physiology and it's natural body balance as said in MAAT. We will see why alkaline diet may be the best version of sustenance over acid.

Week 11 - How food affects your behaviour and what we can do to gain emotional balance in the body

Student will learn the effects of food and its biochemical reaction in the body, allowing to overstand the cognitive and emotional response to biochemical changes within us.

Week 12 - The role of minerals and vitamins in the body and their organic source

Student will be well versed on minerals, how they are sourced and their roles in the body. Student will grasp the importance of feeding your melanin and stimulating your pineal glands from the earth.

Assessment Methods:

- Written tests and exams
- Group work and exercises
- Personal assignments

Additional Student Support:

- Group and one to one tutoring sessions
- Skype consultations
- Email support
- List of comprehensive reading and study materials
- Class notes and slides on request
- Class experiments and practical work

Start:

Sunday 14th January 2018
12pm - 2pm

Graduation:

Sunday April 22nd 2018

Address:

Conway Hall
Red Lion Square
London
WC1R 4RL

Terms & Conditions Apply

TUITION FEE:
£240

The Centre is an education and research institute that works to promote the principles of Pan Africanism as an instrument for liberation and social justice.

MELANIN & BLACK GENETICS

A TRANSFORMATIONAL PROGRAM

COURSE OVERVIEW

This course looks at melanin biochemistry and how carbon is the key element to man and nature. We must over stand exactly what carbon is biochemically, dig deep into the hidden quantum knowledge of melanin and find out what man's Carbon based symbiotic relationship with nature is all about. With cutting edge studies and research we discover artificial melanin by way of Nano carbon particles that will lead future studies of bio-photosynthesis. If this were to be true we will be setting the stage for a new generation of human biological transcendent capable of solar experience and a biosynthetic melanin experience.

SCHEDULE

Week 1 - What is carbon? Understanding the key role of carbon in melanin

Student will be have a great understanding of carbon and it's role in creation, plus students break down carbon from a biochemical and biophysical perspective.

Week 2 - Looking at different Carbon isotopes focussing on carbon 7, 9 and 12

Student will learn about carbon isotopes, the different variations of carbon and where they are expressed in matter.

Week 3 - Carbon as a superconductor as it relates to electricity

Student will learn how carbon and copper are the catalyst for generating electricity in the body.

Week 4 - Different roles of carbon in science what contemporary studies are being done

Student will learn the multiple ways we are using

carbon and what cutting edge studies will define our technology and biotechnology future.

Week 5 - Carbon in nature. A look at some of the amazing ways carbon is used by different species

Student will learn about the way carbon is expressed in different living entities and discover if humans have the scientific techniques to activate those traits.

Week 6 - Bio photons and the symbiotic relation between carbon and light.

An in depth look at the ancient perspective on light and how divine knowledge is passed on through carbon.

Week 7 - Photosynthesis as the future for humans on this planet. Synthesizing oxygen and glucose from sunlight for ATP

Students will be able to understand the melanin potential to advance technological applications to transcend into light beings.

LEVEL: INTERMEDIATE
DURATION: 12 WEEKS

Week 8 - The multi use for carbon in society

Learn how carbon became a massive part of modern civilisation.

Week 9 - Nano technology in society

Student will gain an up to date knowledge on the latest research in nanotechnology and how it is shaping our world.

Week 10 - Synthetic melanin and its applications

Student will learn how we're using nanotechnology to assimilate carbon and the bio sustainability within synthetic beings.

Week 11 - Eradicating disease through our understanding of melanin and its properties

Student will over stand the concept of diseases from a melanin perspective, and learn that defending melanin is purely about meeting nutritional needs.

Week 12 - Melanin in space, is the truth out there?

Research and investigate uncharted territories of melanin science and come up with their own philosophies as well as discoveries based on the current conversation and research.

Assessment Methods:

- Written tests and exams
- Group work and exercises
- Personal assignments

Additional Student Support:

- Group and one to one tutoring sessions
- Skype consultations
- Email support
- List of comprehensive reading and study materials
- Class notes and slides on request
- Class experiments and practical work
